x = speaker

Square waves filtered almost to sine tones; extremely soft.  
All sounds stand unchanged for the duration of the installation.

speakers

speakers

Miniature speakers (3"x3"x3½") placed against the walls and in corners on floor or near ceiling (depending upon the acoustics of the site), camouflaged to blend in to the site. All sound equipment hidden from view (placed in closet adjacent to site); wires running out to speakers will be as unobtrusive as possible (tacked neatly into corners).

Certain details of the installation may change as I set up the equipment and test out the acoustics of the site.
